

Corteva Agriscience Announces Bexoveld™ Active as Global Brand for Newest Active Ingredient from its Innovation Pipeline

May 09, 2023

- *Novel Herbicide Expands Auxin Mimic 6-Arylpicolinate Class of Chemistry Discovered by Corteva Agriscience*
- *Will Provide Cereal Farmers with New and Enhanced Options for Broadleaf Weed Control*

INDIANAPOLIS, May 9, 2023 /PRNewswire/ -- Corteva Agriscience today announces Bexoveld™ active as the brand name for the newest herbicide from its robust innovation pipeline. The active ingredient will offer cereal farmers another tool for controlling broadleaf weeds. Corteva expects to launch Bexoveld in North America in 2028 and in Europe in 2030, pending regulatory reviews.

Bexoveld™ active

"Bexoveld demonstrates Corteva Agriscience's commitment to bringing farmers innovative, sustainable, crop protection solutions," said Robert King, Executive Vice President – Crop Protection Business, Corteva Agriscience. "With Bexoveld, Corteva will continue adding value to the cereal herbicide market by providing expanded spectrum weed control through differentiated products."

Bexoveld is a new proprietary molecule discovered by Corteva and is a third-generation 6-Arylpicolinate (6-AP) herbicide built upon the company's deep knowledge of Arylex™ active and Rinskor™ active herbicides.

"We are very excited about the novel class of auxin herbicides that we are bringing to the market," said Sam Eathington, Chief Technology and Digital Officer, Corteva Agriscience. "These new molecules interact with auxin receptors in a unique manner providing resistance management and differentiated attributes, while also meeting our sustainable innovation criteria."

Bexoveld has demonstrated outstanding control of broadleaf weeds, including key resistant species in cereal crops. It is effective at low use rates against *Kochia*, the number one broadleaf weed in cereal crops in North America, as well as poppy, *Veronica* and wild mustard, which are common weeds impacting wheat, rye, triticale and barley farmers in Europe.

Arylpicolinate herbicides are noted for their favorable regulatory, toxicological, and environmental profiles. The environmental profile of Bexoveld stands out among other auxin mimic herbicides due to its low dose use rate and superior efficacy. Bexoveld breaks down quickly in soil, which means crop restrictions in the following season are minimal. Residue levels of Bexoveld and its metabolites are below the Limit of Quantification in cereal grains.

Bexoveld is highly complementary to Corteva's current cereal herbicide portfolio and will be offered in several pre-mixed formulations with leading Corteva herbicides.

About Corteva Agriscience

Corteva, Inc. (NYSE: CTVA) is a publicly traded, global pure-play agriculture company that combines industry-leading innovation, high-touch customer engagement and operational execution to profitably deliver solutions for the world's most pressing agriculture challenges. Corteva generates advantaged market preference through its unique distribution strategy, together with its balanced and globally diverse mix of seed, crop protection, and digital products and services. With some of the most recognized brands in agriculture and a technology pipeline well positioned to drive growth, the company is committed to maximizing productivity for farmers, while working with stakeholders throughout the food system as it fulfills its promise to enrich the lives of those who produce and those who consume, ensuring progress for generations to come.
